

Enumerate all unweighted shortest paths on knows edges between person1 to person2.

For each knows edge in the path, calculate a weight based on interactions between the pair of Persons of the edge, calculated as a sum of cases #1 and #2 for the Persons (both ways), and the sum of these weights determine the total weight of each path.

Case 1: Replies on Posts, weight += 1.0 × count(c)

Case 2: Replies on Comments, weight += 0.5 × count(c1)
